

FOUNDATION PAPER PIECING INSTRUCTIONS

1. Imagine that we want to piece this block. Regular rotary cutting rulers are not able to provide us with the necessary angles.

5. Flip back to the wrong side of the paper.

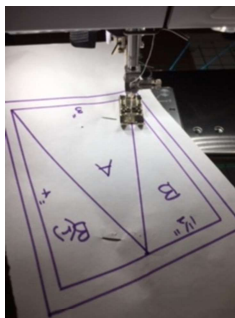

2. A ruler is available to manage the cutting of these angles, but few quilters would feel the need to purchase one.

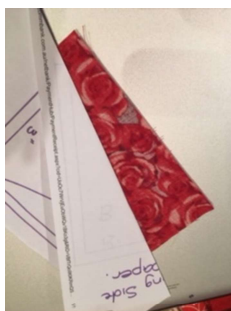

6. Lay Fabric B along trimmed seam line. Pin in place, well back from the seam line.

3. Cut a rectangle of Fabric A and pin to the reverse side of the marked pattern guidelines.

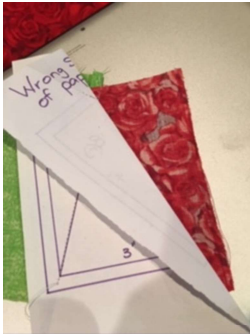

7. Stitch along the marked line with a slightly smaller stitch length than you would normally use.

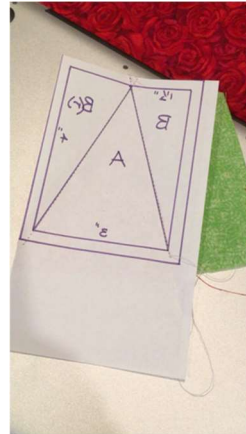

4. Flip over and fold along one of the diagonal lines. Trim Fabric A 1/4" away from the fold.

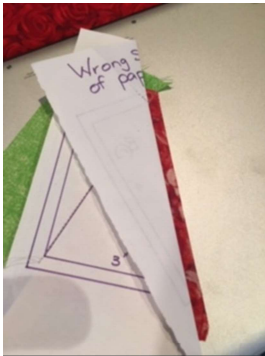

8. Flip over and press seam flat.

9. Repeat the same process on the second diagonal seam line.

13. Trim along outside marked lines.

Finished Block.

The first one or two will be your slowest – you will find that you'll speed up your production rate the more you complete.
